Ms. Manisha Owan

TELUS
25 York St.,
Toronto ON

Dear Ms. Owan,

Thank you for considering my application for the TELUS Engineering, Technology and Business Co-op. I first came across TELUS while learning about Canada's advances in 5G networking and was struck by how TELUS balances innovation with customer impact. What stood out to me is TELUS' culture of mentorship and the ability for students to contribute directly to projects in networking, cybersecurity, software, and AI. As a Computer Science and Business Administration student in the double degree program at the University of Waterloo and Wilfrid Laurier University, I see this co-op as the perfect environment to grow my technical abilities while learning how to deliver real-world value at scale.

At Covalense Digital, I worked on an AI-driven internal platform that evolved from a RAG workflow into a full MCP-orchestrated system. I researched and integrated over 50 libraries, built APIs with FastAPI, and implemented retrieval pipelines using CLIP embeddings for multimodal data. I collaborated in Agile sprints, troubleshooted complex blockers, and documented solutions for future use. These experiences reflect the skills TELUS seeks in software development, data workflows, and building scalable, reliable systems in team settings.

At Wat.AI, I strengthened my backend engineering and data pipeline skills. I integrated ML workflows into production, reduced API latency by over 50 percent, and automated ingestion and transformation processes. This taught me to balance operational demands with long-term improvements, a skill set that translates directly to TELUS' data and AI projects, where efficiency, innovation, and accuracy matter most.

Beyond internships, I launched Bollyguess, a daily music game built with Next.js, Node.js, PostgreSQL, and Docker. I designed the schema, containerized services, and automated daily updates with GitHub Actions. I also trained a machine learning classifier in PyTorch and TensorFlow on over 10,000 samples, reaching an 85 percent F1 score. Building Bollyguess gave me experience across the full development lifecycle, from requirements gathering to deployment, while also showing me how to apply AI to improve user experience.

Outside of technical work, I bring leadership and communication skills. As lead for KNOWN Consulting at the BDO Future Leaders Challenge, I guided my team to a top-six finish out of over 300 teams, presenting our ESG-driven loyalty program to an audience of 800. I structured presentations, analyzed risks, and communicated solutions clearly to both technical and non-technical stakeholders. This reflects the strong interpersonal, problem-solving, and leadership skills that TELUS emphasizes.

Together, these experiences highlight my ability to work across networking, software, cybersecurity, and AI, while bringing creativity, accuracy, and initiative to every project. I am motivated by TELUS' culture of innovation and mentorship, and I would be excited to contribute to projects that improve lives through technology while growing my own skills.

Best regards,
Om Nathwani
